

# N12/M13 Transmission Line Upgrade Project - Virtual Event

Thursday, July 14, 2022 6-8 p.m.

## What is the N12/M13 Transmission Line Upgrade Project?

The N12/M13 Transmission Line Upgrade Project is a proposed reliability project to separate two transmission lines currently carried on one set of transmission structures. The 1.85-mile segment of overhead power lines to be reconstructed begins on the west shore of the Taunton River in Somerset (Riverside Avenue at Pottersville Switching Station), crosses the river to Fall River, and continues east in an existing transmission corridor to the Sykes Road Substation. Each existing green lattice structure will be replaced with two steel monopoles. One set of monopoles will support the N12 line and one set will carry the M13 line.

## Virtual Event Thursday, July 14, 2022 6-8 p.m.

Project neighbors in Somerset and Fall River are invited to learn more about the N12/M13 Transmission Line Upgrade Project and discuss the project with subject matter experts. During the event community members will have the opportunity to learn about the project and talk to and ask questions of the project team. Experts on construction, engineering, permitting, and other topics will be present to answer questions. This is a virtual event. Presentation will be made and followed by a Q&A.
